

MC-2700 PACK PNEUMATIC GUN AND CARTRIDGE INJECTION

MC Fast Pack Cartridge Series - 2700

Properties:

1. Low-viscosity, polyurethane-based elastomer resin
2. Flexible sealing
3. Accelerated reaction in contact with water with limited increase in volume
4. Certified for potable water contact

Applications:

1. Flexible sealing and filling of cracks, joints and voids in building construction, underground and civil engineering under dry and water-bearing conditions. Sealing of potable water structures

Packers:

1. Fast Pack series offers both adhesion and hammer packers and tools for surface and bore hole injection options.
2. Please see Principles of Injection Flyer for more information on packer options and method guide for pneumatic gun and cartridge injection.

Fast & Effective Results:

1. A fast, ready-to-use system, no separate mixing of material using a set mixing ratio.
2. No material wastage through mixing up too much material, cleaning the pump and more.
3. No additional cleaning of pump and equipment and no solvents needed.
4. No additional waste disposal of liquid waste or reacted materials
5. Allows optimal viscosity as mixing occurs just before injection
6. Lower purchase cost compared to injection pumps
7. No maintenance required
8. Single person injection job and guidelines flyer provided.
9. Control amount of material by cartridge.
10. Safe contained system protects for applicators and environment due to lower injection pressures and no open liquids or thinners.

The MC Fast Pack cartridge series offers flexible, paste, and rigid PU, low viscosity epoxy and water stop foam injection options. Follow TDS/SDS for more information and ensure proper industry and acceptable standard for cleaning, surface preparation and application by injection.
